Key feature

Welcome to

CARD VAULT

- 1 Web application designed for TCG (Trading Card Games) collectors.
- 2 Allows users to store and organize their personal card collection in a virtual vault.
- 3 Multi-license support: users can manage cards from different franchises (e.g., Pokémon, Magic, etc.).
- 4 Includes an AI card recognition system that allows users to scan a card and automatically identify and add it to their collection.

Why did we created Card Vault ?

Most existing applications are limited to a single franchise, while Card Vault allows collectors to manage multiple licenses in one place.

ABOUT US

Franck Spadotto
Lead Developer
Machine Learning Developer

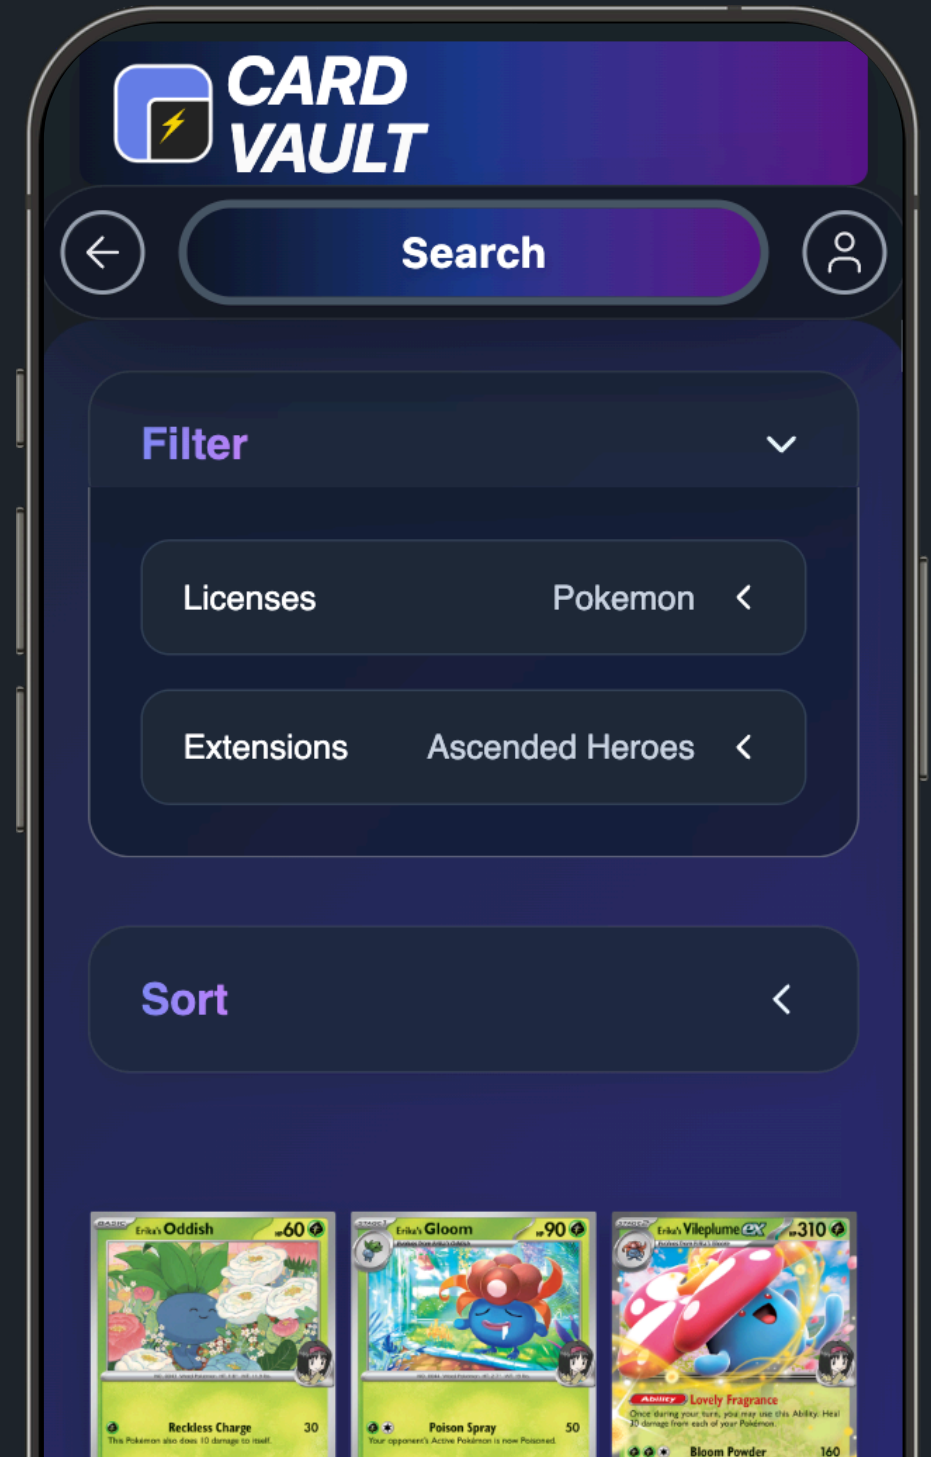

Haïtu Nguyen
Front-end Developer

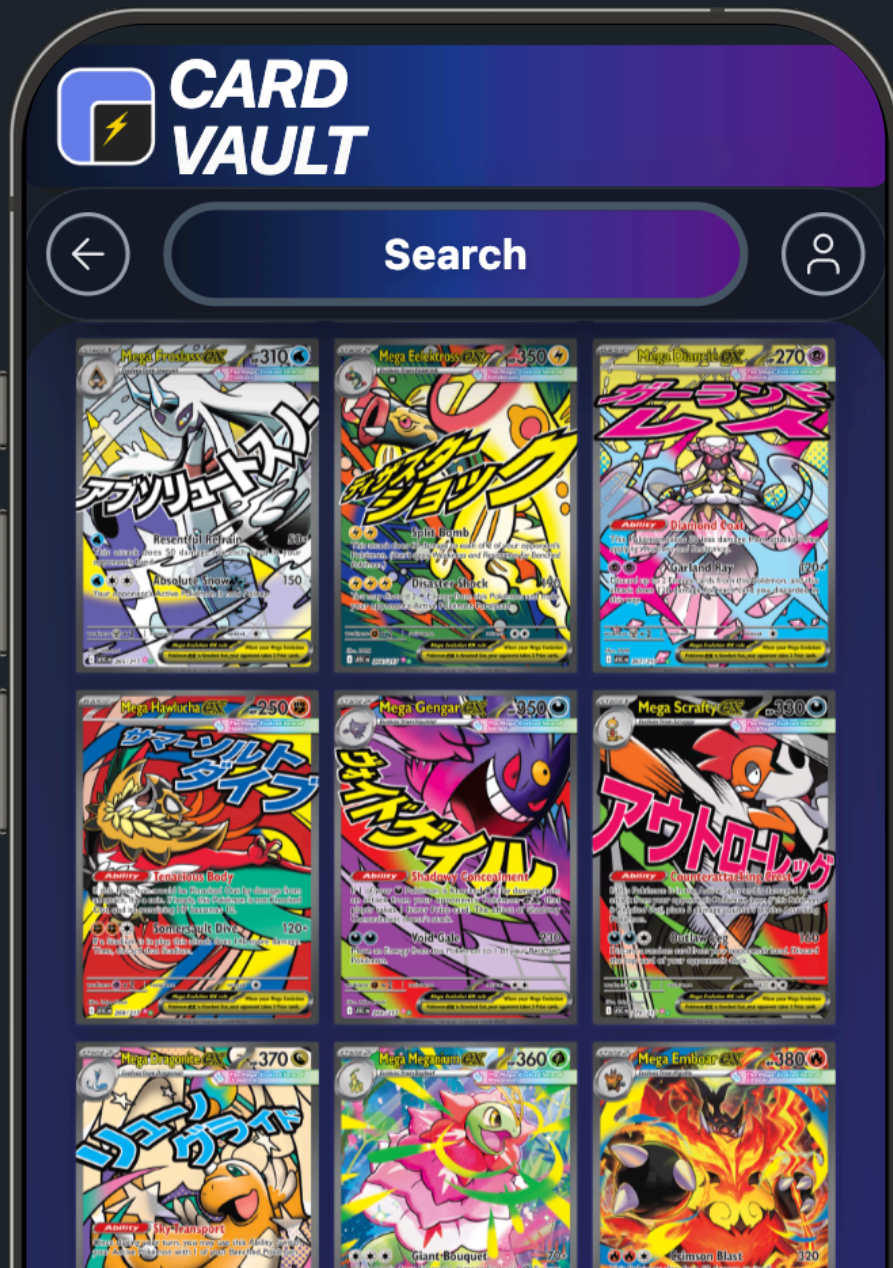

Jérémy Laurens
Back-end Developer

FRONT-END

- 1 Built with **React**, **Tailwind CSS** and **DaisyUI**.
- 2 Responsive & mobile-first design.
- 3 Reusable components, centralised **API** calls, and light/dark mode.
- 4 Dashboard, statistics, scan, vault, search pages.

BACK-END

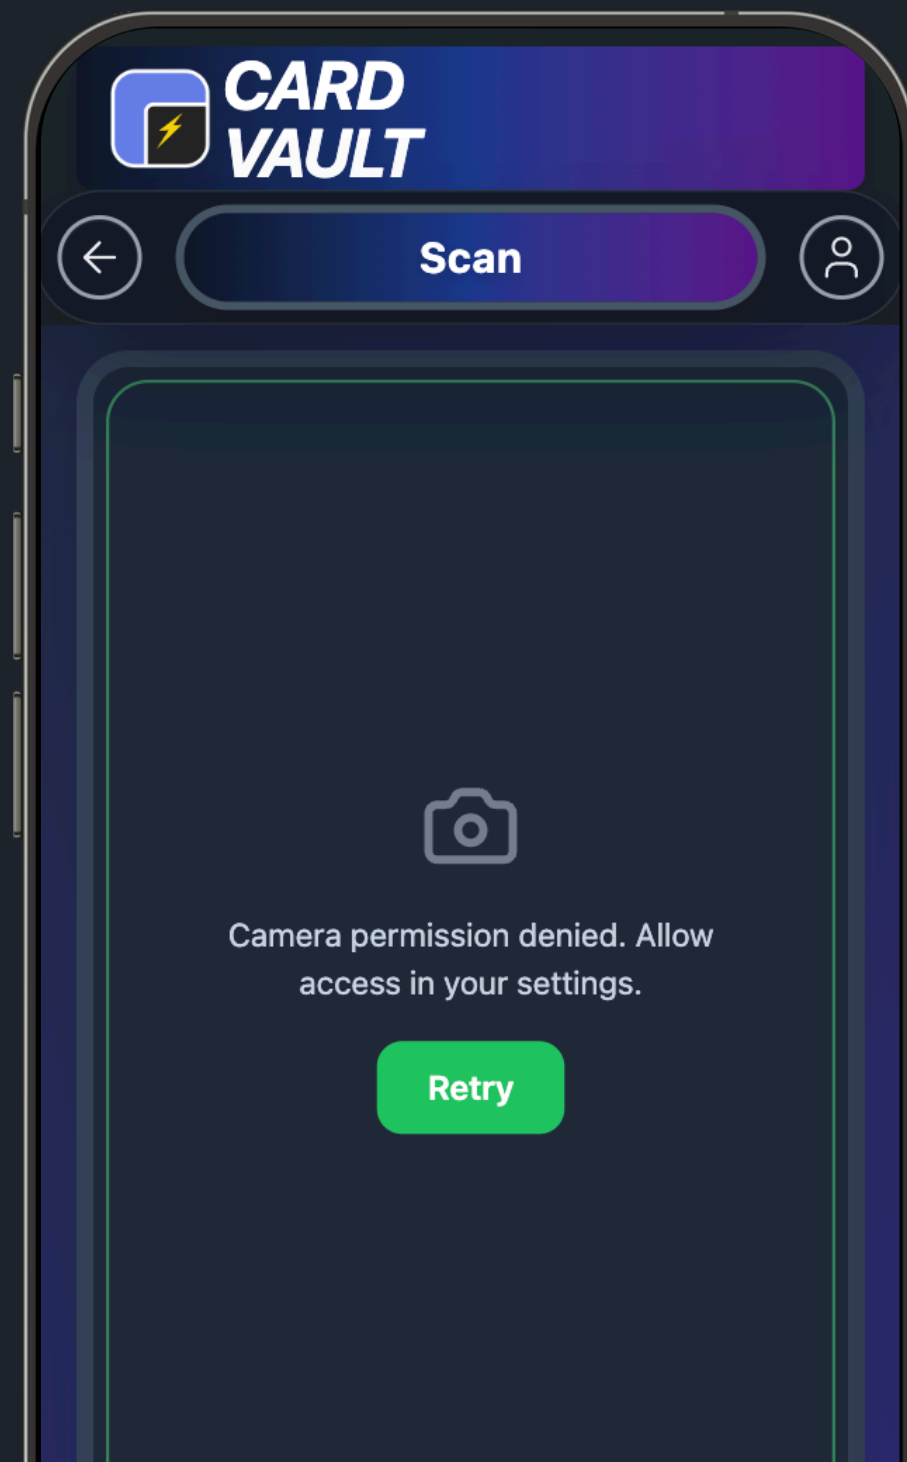

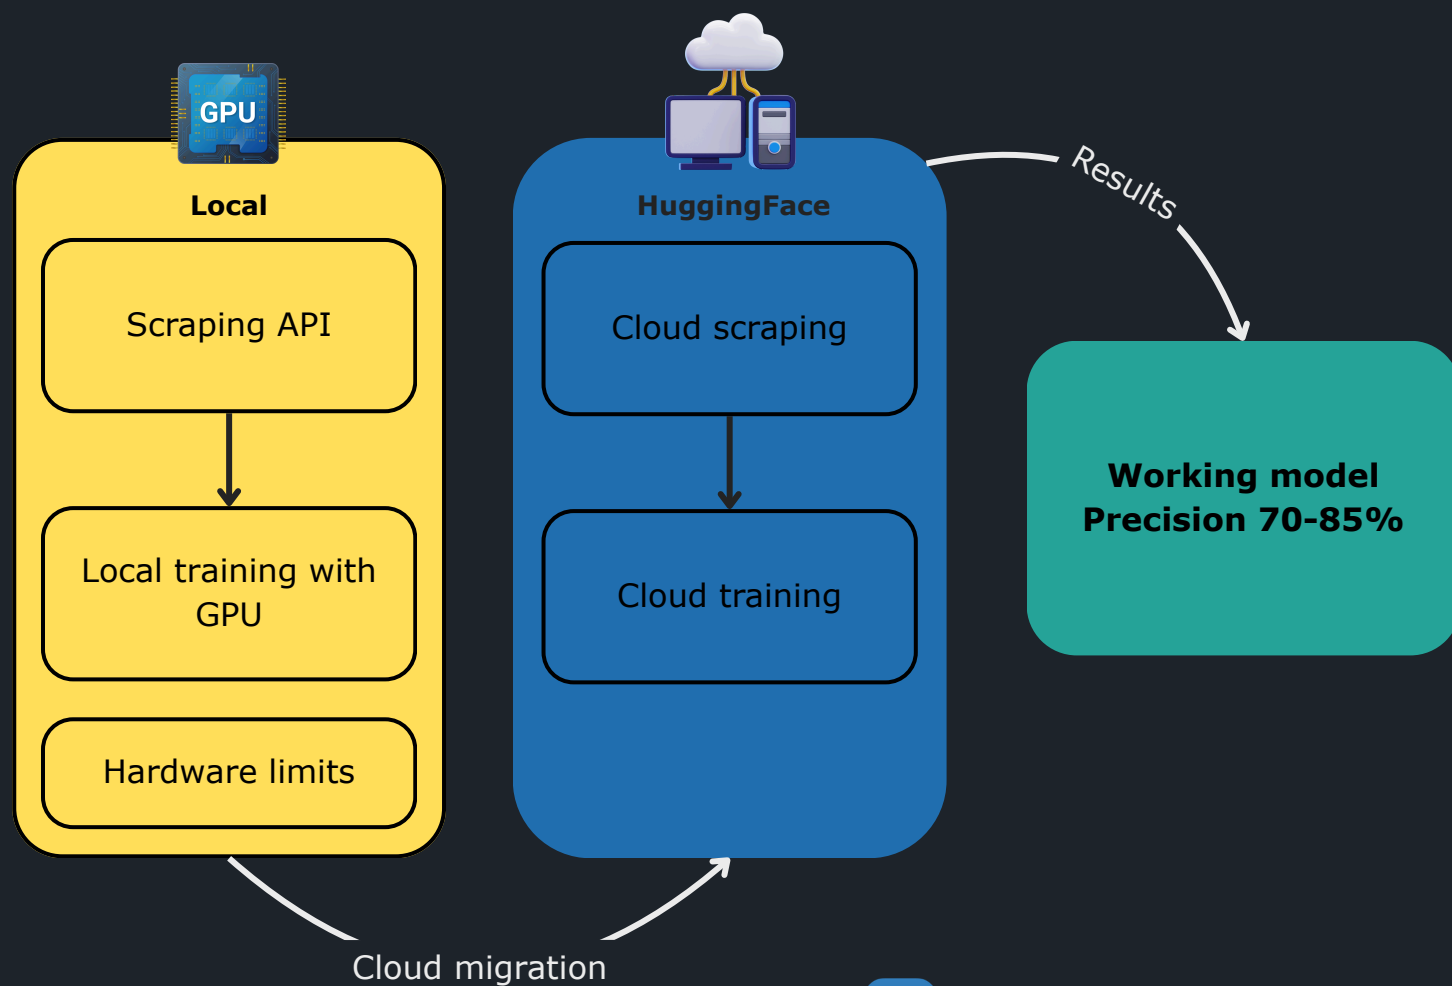

- 1 Built with **Python**, **FastAPI**, **PostgreSQL** database.
- 2 **External APIs** : **TcgDex** for Pokémon, **Scryfall** for Magic.
- 3 Standardized data output from different APIs.
- 4 **JWT** authentication and **bcrypt** password hashing.
- 5 Manage card collection using manual search or by photo recognition.

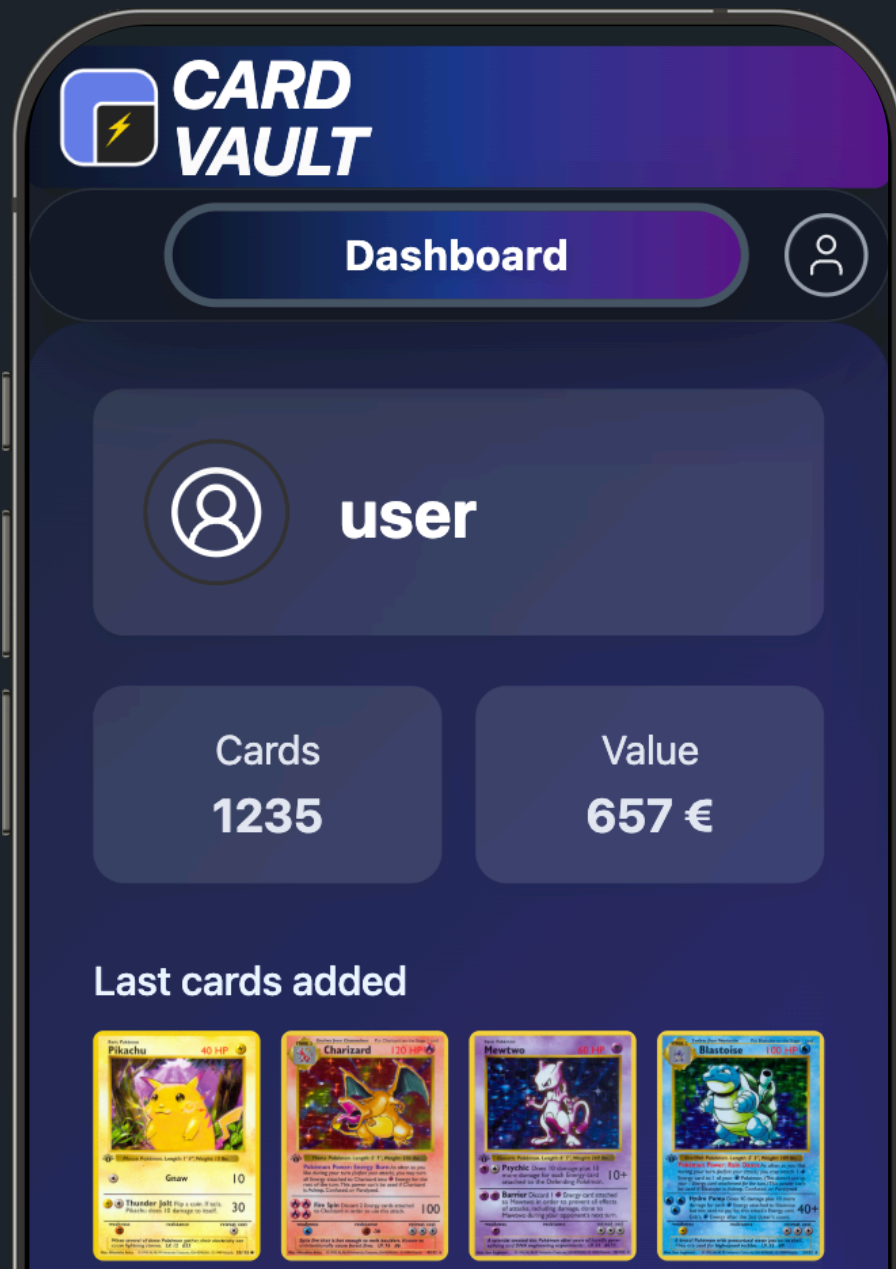

JWT
BCRYPT
SQLAlchemy

MACHINE LEARNING

DEVOPS

- 1 Infrastructure initialisation and team support.
- 2 Deployment on a securised local server.
- 3 Security audit was conducted by cybersecurity Holberton students.
- 4 Online working app that is near professional standards.

LIVE DEMONSTRATION

THANK YOU !

A special thank you to the entire Holberton Toulouse team and
to all our classmate from the C27.

Thank you to Audrey for the opportunity !!
